New Twist in the Labor Market

In December 2019, women outnumbered men in the U.S. workforce for the first time since April 2010, when layoffs due to the recession disproportionately affected male workers. A larger percentage of men age 16 and older (69.2%) are participating in the workforce than women (57.7%). However, there are more women than men in the population, and big industries such as health and education are keeping more of them in the workforce.

Tapping Retirement Savings During a Financial Crisis

As the number of COVID-19 cases began to skyrocket in March 2020, Congress passed the Coronavirus Aid, Relief, and Economic Security (CARES) Act. The legislation may make it easier for Americans to access money in their retirement plans, temporarily waiving the 10% early-withdrawal penalty and increasing the amount they could borrow. Understanding these new guidelines and the other rules for loans and early withdrawals may help you determine if they are appropriate options during a financial crisis. (Remember that tapping retirement savings now could risk your financial situation in the future.)

Penalty-Free Withdrawals

The newest exception to the 10% early-withdrawal penalty allows IRA account holders and retirement plan participants to take distributions of up to \$100,000 in 2020 for a "coronavirus-related" reason.* These situations include a diagnosis of COVID-19 for account owners and certain family members; a financial setback due to a quarantine, furlough, layoff, or reduced work hours, and in the case of business owners, due to closures or reduced hours; or an inability to work due to lack of child care as a result of the virus. This temporary exception augments the other circumstances for which a penalty-free distribution is typically allowed:

- Death or disability of the account owner
- Unreimbursed medical expenses exceeding 7.5% of adjusted gross income (increases to 10% in 2021)
- A series of "substantially equal periodic payments" over your life expectancy or the joint life expectancy of you and your spouse
- Birth or adoption of a child, up to \$5,000 per account owner
- Certain cases when military reservists are called to active duty

In addition, IRAs (but not work-based plans) allow penalty-free withdrawals for a first-time home purchase (\$10,000 lifetime limit), qualified higher-education expenses, and payments of health insurance premiums in the event of a layoff.

Work-based plans allow exceptions for those who separate from service after age 55 (50 in the case of qualified public safety employees) and distributions as part of a qualified domestic relations order.

Tax Consequences

Penalty-free does not mean tax-free, however. In most cases, when you take a penalty-free distribution, you must report the full amount of the distribution on your income tax return for that year. However, the income associated with a coronavirus-related distribution can be spread over three years for tax purposes, with up to three years to reinvest the money.¹

Retirement Plan Loans

If your work-based retirement plan allows loans, you typically can borrow up to the lesser of 50% of your vested balance or \$50,000. Most loans must be repaid within five years, but if the money is used to purchase a primary residence, the repayment period may be longer. The CARES Act permits employers to increase this amount to the lesser of 100% of the vested balance or \$100,000 for loans to coronavirus-affected individuals made between March 27, 2020, and September 22, 2020.* Affected participants who have outstanding loans on or after March 27, 2020, will be able to delay any payments due in 2020 by one year.²

Hardship Withdrawals

Many work-based retirement plans also permit hardship withdrawals in certain circumstances. Although these distributions are not exempt from the 10% early-withdrawal penalty, they can be a lifeline for people who need money in an emergency.

For more information about your options, contact your IRA or retirement plan administrator.

*Employers do not have to adopt the new withdrawal and loan provisions.

1) Amounts reinvested may reduce your tax obligation on the distributions; however, due to the timing of distributions and required tax filings, you may have to file an amended return to seek a refund on any taxes previously paid on withdrawn amounts. 2) The original five-year repayment period will be extended for the delay, but interest will continue to accrue. 3) Source: Plan Sponsor Council of America, 2019 (2018 data)

Turbulent Times: Bear Markets Come and Go

The longest bull market in history lasted almost 11 years before coronavirus fears and the realities of a seriously disrupted U.S. economy brought it to an end.¹

Bear markets are typically defined as declines of 20% or more from the most recent high, and bull markets are sustained increases of 20% or more from the bear market low. But there is no official declaration, so often there are different interpretations and a fair amount of debate regarding when these cycles begin and end.

Between February 19 and March 23, 2020, the S&P 500 fell 34% and then took just 15 days to bounce back above the 20% threshold that would technically mark the beginning of a new bull market.²

Still, most investors wait to see if volatility subsides and higher prices persist before they cheer the exit of a bear market. And in the midst of the pandemic, without a clear economic picture, it could be more difficult than usual to tell whether any market advance is a short-term rally or the start of a longer upward trend.

Historical Perspective

The CBOE Volatility Index (VIX), a closely watched measure of stock market volatility and investor anxiety, hit all-time highs in March 2020.³

If you are losing sleep over volatility driven by disheartening news, it may help to remember that the economy and the stock market are cyclical. There have been 10 bear markets since 1950 (not counting the one that began in 2020). Each of these declines was triggered by a different set of circumstances, but the market recovered eventually every time (see table).⁴

On average, bull markets lasted longer (1,955 days) than bear markets (431 days) over this period, and the average bull market advance (172.0%) was greater than the average bear market decline (-34.2%).

The bottom line is that neither the ups nor the downs last forever, even if they feel as though they will. There are buying opportunities in the midst of the worst downturns. And in some cases, people have profited over time by investing carefully just when things seemed bleakest.

Bear Markets Since 1950	Calendar Days to Bottom	U.S. Stock Market Decline (S&P 500 Index)
August 1956 to October 1957	446	-21.5%
December 1961 to June 1962	196	-28.0%
February 1966 to October 1966	240	-22.2%
November 1968 to May 1970	543	-36.1%
January 1973 to October 1974	630	-48.2%
November 1980 to August 1982	622	-27.1%
August 1987 to December 1987	101	-33.5%
July 1990 to October 1990	87	-19.9%*
March 2000 to October 2002	929	-49.1%
October 2007 to March 2009	517	-56.8%

*The intraday low marked a decline of -20.2%, so this cycle is often considered a bear market.

Making Changes

If you're reconsidering your current investment strategy, a volatile market is probably the worst time to turn your portfolio inside out. Dramatic price swings can magnify the impact of a wholesale restructuring if the timing of that move is a little off.

Changes in your portfolio don't necessarily need to happen all at once. Having appropriate asset allocation and diversification is still the fundamental basis of thoughtful investment planning, so try not to let fear derail your long-term goals.

The return and principal value of stocks fluctuate with changes in market conditions. Shares, when sold, may be worth more or less than their original cost. Asset allocation and diversification are methods used to help manage investment risk; they do not guarantee a profit or protect against investment loss.

The performance of an unmanaged index is not indicative of the performance of any specific investment. Individuals cannot invest directly in an index. Telemedicine: The Virtual Doctor Will See You Now

Widespread smartphone use, loosening regulations, and employers seeking health cost savings are three trends that have been driving the rapid expansion of telemedicine. And that was before social distancing guidelines to help control the spread of COVID-19 made the availability of remote medical care more vital than anyone anticipated.

Easy Interaction with Health Professionals

Telemedicine offers a way for patients to interact with doctors or nurses through a website or mobile app using a secure audio or video connection.

Patients have immediate access to advice and treatment any time of the day or night, while avoiding unnecessary and costly emergency room visits. And health providers have the ability to bill for consultations and other services provided from a distance.

Telemedicine can be used to treat minor health problems such as allergies and rashes, or for an urgent condition such as a high fever. It also makes it easier to access therapy for mental health issues such as depression and anxiety.

In other cases, doctors can remotely monitor the vital signs of patients with chronic conditions, or follow up with patients after a hospital discharge. Telemedicine can also fill gaps in the availability of specialty care, especially in rural areas.

Telemedicine offers a way for patients to interact with doctors or nurses through a website or mobile app using a secure audio or video connection.

Offered by Many Health Plans

In 2019, nearly nine out of 10 large employers (500 or more employees) offered telemedicine programs in their benefit packages, but many workers had not tried them out.

Only 9% of eligible employees utilized telemedicine services in 2018 (the most recent year for which data is available), even though virtual consultations often have lower copays and are generally less expensive than in-person office visits, especially for those with high deductibles.¹

If your health plan includes telemedicine services, you might take a closer look at the details, download the app, and/or register for an online account. This way, you'll be ready to log in quickly the next time your family faces a medical problem.
