Greetings, clients and friends! We're quickly approaching year end, and it's certainly been a choppy one. From excitement, to anxiety, to capitulation – we've experienced almost every point on the Cycle of Investor Emotions along the way. At Mission Financial, we're dedicated to walking hand and hand with you through all market cycles. As we enter the season of gratitude, reflection, and resolutions, please know that we are grateful for the opportunity to serve you, and we remain resolved to helping you reach your financial goals!

Keep an eye out for our Outlook 2023 Webinar in January, where we'll hear from our advisors what to expect for the coming year. Until then, we wish you and your families a very Merry Christmas and a peaceful and prosperous New Year!

Spending Higher Than Expected for More Retirees in 2022

Considering high inflation, it's not surprising that the percentage of retirees who said their spending was higher than expected increased in 2022 over 2021. These surveys were conducted in January of each year, so with inflation continuing to run high, it's likely that even more retirees may be experiencing unexpected spending.

Year-End 2022 Tax Tips

Here are some things to consider as you weigh potential tax moves before the end of the year.

Set Aside Time to Plan

Effective planning requires that you have a good understanding of your current tax situation, as well as a reasonable estimate of how your circumstances might change next year. There's a real opportunity for tax savings if you'll be paying taxes at a lower rate in one year than in the other. However, the window for most tax-saving moves closes on December 31, so don't procrastinate.

Defer Income to Next Year

Consider opportunities to defer income to 2023, particularly if you think you may be in a lower tax bracket then. For example, you may be able to defer a year-end bonus or delay the collection of business debts, rents, and payments for services in order to postpone payment of tax on the income until next year.

Accelerate Deductions

Look for opportunities to accelerate deductions into the current tax year. If you itemize deductions, making payments for deductible expenses such as medical expenses, qualifying interest, and state taxes before the end of the year (instead of paying them in early 2023) could make a difference on your 2022 return.

Make Deductible Charitable Contributions

If you itemize deductions on your federal income tax return, you can generally deduct charitable contributions, but the deduction is limited to 50% (currently increased to 60% for cash contributions to public charities), 30%, or 20% of your adjusted gross income (AGI), depending on the type of property you give and the type of organization to which you contribute. (Excess amounts can be carried over for up to five years.)

Increase Withholding

If it looks as though you're going to owe federal income tax for the year, consider increasing your withholding on Form W-4 for the remainder of the year to cover the shortfall. The biggest advantage in doing so is that withholding is considered as having been paid evenly throughout the year instead of when the dollars are actually taken from your paycheck.

Save More for Retirement

Deductible contributions to a traditional IRA and pre-tax contributions to an employer-sponsored retirement plan such as a 401(k) can help reduce your 2022 taxable income. If you haven't already contributed up to the maximum amount allowed, consider doing so. For 2022, you can contribute up to $20,500 to a 401(k) plan ($27,000 if you're age 50 or older) and up to $6,000 to traditional and Roth IRAs combined ($7,000 if you're age 50 or older). The window to make 2022 contributions to an employer plan generally closes at the end of the year, while you have until April 18, 2023, to make 2022 IRA contributions. (Roth contributions are not deductible, but qualified Roth distributions are not taxable.)

Take Any Required Distributions

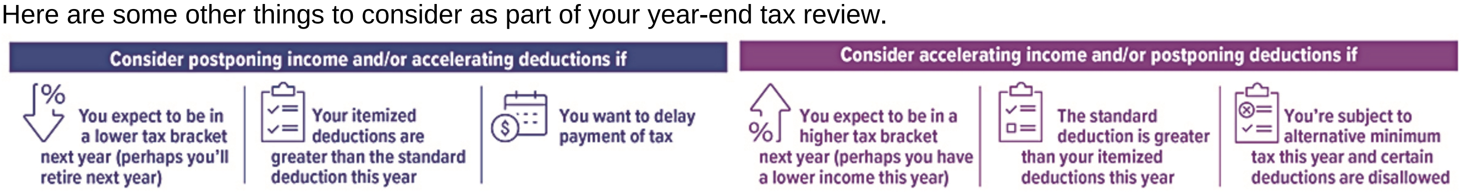
If you are age 72 or older, you generally must take required minimum distributions (RMDs) from your traditional IRAs and employer-sponsored retirement plans (an exception may apply if you're still working for the employer sponsoring the plan). Take any distributions by the date required — the end of the year for most individuals. The penalty for failing to do so is substantial: 50% of any amount that you failed to distribute as required. Annual distributions from inherited retirement accounts are generally required by beneficiaries (as well as under the 10-year rule); there are special rules for spouses.

Weigh Year-End Investment Moves

Though you shouldn't let tax considerations drive your investment decisions, it's worth considering the tax implications of any year-end investment moves. For example, if you have realized net capital gains from selling securities at a profit, you might avoid being taxed on some or all of those gains by selling losing positions. Any losses above the amount of your gains can be used to offset up to $3,000 of ordinary income ($1,500 if your filing status is married filing separately) or carried forward to reduce your taxes in future years.

More to Consider

Here are some other things to consider as part of your year-end tax review.



When Should Young Adults Start Investing for Retirement?

As young adults embark on their first real job, get married, or start a family, retirement might be the last thing on their minds. Even so, they might want to make it a financial priority. In preparing for retirement, the best time to start investing is now — for two key reasons: compounding and tax management.

Power of Compound Returns

A quick Internet search reveals that Albert Einstein once called compounding "the most powerful force in the universe," "the eighth wonder of the world," or "the greatest invention in human history." Although the validity of these quotes is debatable, Einstein would not have been far off in his assessments.

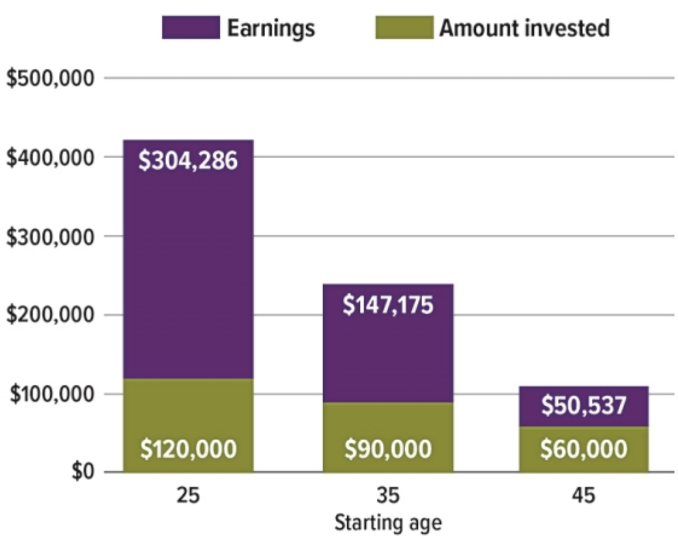
Compounding happens when returns earned on investments are reinvested in the account and earn returns themselves. Over time, the process can gain significant momentum.

For example, say an investor put $1,000 in an investment that earns 5%, or $50, in year one, which gets reinvested, bringing the total to $1,050. In year two, that money earns another 5%, or $52.50, resulting in a total of $1,102.50. Year three brings another 5%, or $55.13, totaling $1,157.63. Each year, the earnings grow a little bit more.

Over the long term, the results can snowball. Consider the examples in the accompanying chart.

A Head Start Can Be a Strong Ally

This chart illustrates how much an investor could accumulate by age 65 by investing $3,000 a year starting at age 25, 35, and 45 and earning a 6% annual rate of return, compounded annually.



These hypothetical examples of mathematical compounding are used for illustrative purposes only and do not reflect the performance of any specific investments. Fees, expenses, and taxes are not considered and would reduce the performance shown if they were included. Rates of return will vary over time, particularly for long-term investments. Investments offering the potential for higher rates of return also involve a higher degree of investment risk. Actual results will vary.

Tax Management

Another reason to start investing for retirement now is to benefit from tax-advantaged workplace retirement plans and IRAs.

Lower taxes now. Contributions to traditional 401(k)s and similar plans are deducted from a paycheck before taxes, so contributing can result in a lower current tax bill. And depending on a taxpayer's income, filing status, and coverage by a workplace plan, contributions to a traditional IRA may result in an income tax deduction.

Tax-deferred compounding. IRAs and workplace plans like 401(k)s compound on a tax-deferred basis, which means investors don't have to pay taxes on contributions and earnings until they withdraw the money. This helps drive compounding potential through the years.

Future tax-free income. Roth contributions to both workplace accounts and IRAs offer no immediate tax benefit, but earnings grow on a tax-deferred basis, and qualified distributions are tax-free. A qualified distribution is one made after the Roth account has been held for five years and the account holder reaches age 59½, dies, or becomes disabled.

Saver's Credit. In 2022, single taxpayers with adjusted gross incomes of up to $34,000 ($66,000 if married filing jointly) may qualify for an income tax credit of up to $1,000 ($2,000 for married couples) for eligible retirement account contributions. Unlike a deduction — which helps reduce the amount of income subject to taxes — a credit is applied directly to the amount of taxes owed.

Avoiding penalties. Keep in mind that withdrawals from pre-tax retirement accounts prior to age 59½ and nonqualified withdrawals from Roth accounts are subject to a 10% penalty on top of regular income tax.

Additional Fuel for the Fire

Workplace plans that offer employer matching or profit-sharing contributions can further fuel the tax-advantaged compounding potential. Investors would be wise to consider taking full advantage of employer matching contributions, if offered.

Don't Delay

With the power of compounding and the many tax advantages, it may make sense to make retirement investing a high priority at any age.

Tips for Safe Online Shopping

According to the National Retail Federation, online sales accounted for over $1 trillion of total U.S. retail sales in 2021.[1] Online shopping is especially popular during the holiday season, enabling you to avoid the crowds and conveniently purchase gifts using your smartphone or computer. Unfortunately, the popularity of online shopping also means that cyber criminals and online scams are more prevalent than ever. Here are some tips to help protect yourself when shopping online.

Check your device. Make sure that all of your devices (e.g., mobile phone, computer, and tablet) are up-to-date and configured to update automatically or notify you when updates are available.

Maintain strong passwords. Create strong passwords, at least 8 characters long, using a combination of lower- and upper-case letters, numbers, and symbols, and don't use the same password for multiple accounts.

Use multi-factor authentication when available. Two-factor or multi-factor authentication, which involves using a one-time code sent to your mobile device in addition to your password, provides an extra layer of protection.

Watch out for phishing emails. Beware of emails that contain links or ask for personal information. Legitimate shopping websites will never email you and randomly ask for your personal information.

In addition, don't be fooled by fake package delivery updates. Make sure that all delivery emails are from reputable delivery companies you recognize.

The increase in popularity of online shopping means that cyber criminals and online scams are more prevalent than ever before.

Beware of scam websites. Typing one word into a search engine to reach a particular retailer's website may be easy, but it might not take you to the site you are actually looking for. Scam websites often contain URLs that look like misspelled brand or store names to trick online shoppers. To help determine whether an online retailer is reputable, research sites before you shop and read reviews from previous customers. Look for *https://* in the URL and not just *http://,* since the "s" indicates a secure connection.

Use credit instead of debit. Credit cards generally have better protection than debit cards against fraudulent charges. In addition, consider using a mobile payment service (e.g., Apple Pay or Google Pay), which doesn't require you to give your credit-card information directly to a merchant.
