## Quarterly Insights – April 2025

Stocks started the new year by extending the declines of late 2024, as worries the Federal Reserve could pause interest rate cuts weighed on the markets early in January. However, solid economic data, encouraging inflation readings and positive commentary from Fed officials about future rate cuts pushed back on those fears and the S&P 500 recovered much of those initial losses by mid-month. Additionally, stocks rallied into and following Inauguration Day, as investors anticipated a “pro-growth” administration taking power while fears of dramatic tariffs on “Day One” of the Trump presidency went unfulfilled. The S&P 500 hit a new all-time high shortly after President Trump’s inauguration and the rally continued into late January after the Fed signaled it still expected to cut rates in 2025, further calming fears of a pause in rate cuts. However, at the very end of January, investors got a preview of looming tariff/trade volatility when President Trump threatened 25% tariffs on Colombia. However, those tariffs were not ultimately implemented, so markets largely ignored them and stocks finished January with a solid gain.

Trade and tariff policy became a major influence on markets in February, however, and dramatically increased market volatility by month-end. During the first few days of February, President Trump threatened and then delayed 25% tariffs on Mexico and Canada, which temporarily spiked market volatility. However, the one-month delay of those tariffs led markets to believe that President Trump was using tariff threats as a negotiating tactic and that substantial tariffs would not be implemented after all. That sentiment helped to ease investor concerns while economic data remained solid. Those factors combined to send the S&P 500 to a new all-time high on February 19<sup>th</sup>. However, the rally would not last. In late February consumer confidence declined and some economic reports implied the trade and tariff uncertainty was starting to slow economic growth. Meanwhile, tariff threats and general policy volatility continued through the end of the month and that, combined with lower consumer sentiment, sparked a “growth scare” amongst investors that weighed on stocks and sent the S&P 500 marginally lower in February.

The market declines accelerated in March as President Trump made good on his threat to implement 25% tariffs on Mexico and Canada (and an additional 10% tariff on China). President Trump delayed some of those tariffs on Mexico and Canada until early April, but many other tariffs were left in place and that shattered investors’ belief that tariff threats were just a negotiating tactic. Meanwhile, several corporations from various sectors began to lower earnings guidance, citing reduced consumer

spending and business investment. Those guidance cuts reinforced fears that policy uncertainty could cause an economic slowdown, and the S&P 500 fell to a six-month low. In late March, markets tried to rebound amidst a lull in tariff threats but it didn't last as President Trump announced 25% auto tariffs on March 26<sup>th</sup>, sending stocks lower once again. The S&P 500 finished the quarter near the year-to-date lows.

In sum, investor optimism for a pro-growth agenda and tax cuts was replaced by rising concerns about a new global trade war and a slowing U.S. economy, as policy uncertainty and ineffective communication crushed investor and consumer confidence.

### **First Quarter Performance Review**

Market internals revealed that while the S&P 500 logged a moderately negative return for the quarter, the declines in the index were mostly due to sharp drops in widely held technology and consumer stocks, as other parts of the market proved resilient.

US Equity Indexes	Q1 Return	YTD
S&P 500	-4.27%	-4.27%
DJ Industrial Average	-0.87%	-0.87%
NASDAQ 100	-8.07%	-8.07%
S&P Midcap 400	-6.10%	-6.10%
Russell 2000	-9.48%	-9.48%

*Source: YCharts*

Internationally, foreign markets outperformed the S&P 500 and finished the quarter with a positive return. Foreign developed markets saw the largest gains and outperformed emerging markets after Germany and other EU countries signaled a willingness to increase deficit spending to boost economic growth and defense. Emerging markets logged more modest gains thanks to better-than-expected Chinese economic data.

International Equity Indexes	Q1 Return	YTD
MSCI EAFE TR USD (Foreign Developed)	7.01%	7.01%
MSCI EM TR USD (Emerging Markets)	3.01%	3.01%
MSCI ACWI Ex USA TR USD (Foreign Dev & EM)	5.36%	5.36%

*Source: YCharts*

Commodities were modestly positive in the first quarter as strength in gold helped to boost the major commodity indices. Gold hit a new record high and traded above \$3000/oz. thanks to a weaker U.S. dollar.

Commodity Indexes	Q1 Return	YTD
S&P GSCI (Broad-Based Commodities)	4.89%	4.89%
S&P GSCI Crude Oil	-0.51%	-0.51%
GLD Gold Price	19.02%	19.02%

Switching to fixed income markets, the leading benchmark for bonds (Bloomberg Barclays US Aggregate Bond Index) realized a modestly positive return for the first quarter of 2025. Better-than-expected inflation readings and general concerns about economic growth boosted bonds broadly and helped longer-duration bonds to outperform shorter-duration bills and notes, as investors sought higher long-term yields amidst policy uncertainty.

US Bond Indexes	Q1 Return	YTD
BBgBarc US Agg Bond	2.78%	2.78%
BBgBarc US T-Bill 1-3 Mon	1.04%	1.04%
ICE US T-Bond 7-10 Year	3.90%	3.90%
BBgBarc US MBS (Mortgage-backed)	3.06%	3.06%
BBgBarc Municipal	-0.22%	-0.22%
BBgBarc US Corporate Invest Grade	2.31%	2.31%
BBgBarc US Corporate High Yield	1.00%	1.00%

### **Second Quarter Market Outlook**

Stocks begin the second quarter of 2025 following the worst quarterly performance in nearly three years and facing dual market headwinds of policy uncertainty and potentially slowing economic growth. However, while clearly markets are facing legitimate headwinds, it's important to realize that stocks fell in the first quarter mostly on fears of what might happen in the economy, not because of what is actually occurring. Point being, if future policy decisions and an economic slowdown aren't as bad as currently feared, it could cause a substantial market rebound in the coming months.

Starting with trade and tariff policy, there can obviously be improvement in the communication strategy from the administration regarding its policy goals and there were signs late in the first quarter that officials realized their errors and were working to communicate more directly, effectively and consistently with markets. Regardless of what actual tariff policy ultimately looks like, improvement in communication of the administration's policy goals will be a market positive and could help end this pullback.

Turning to economic growth, while fears of a slowdown surged in the first quarter, economic data stayed resilient. Jobless claims remained subdued, measures of manufacturing and service activity showed continued expansion and the unemployment rate remained historically low, close to 4.0%. Put simply, there was little in the actual data in Q1 to imply the economy is weakening. If economic data stays solid throughout the second quarter, it will push back on those recession fears and could help fuel a rebound in the markets.

On market valuation, the declines of the first quarter have resulted in the S&P 500 trading at a more reasonable valuation compared to the start of the year, as extremely bullish investor sentiment has been replaced by a decidedly bearish outlook (which has historically set the stage for a market rebound). Bottom line, the market was richly valued at the start of the year and investor sentiment was complacent, but the volatility of the first quarter has removed both of those conditions and that is a general positive for the markets.

Bottom line, the first quarter did contain several negative surprises for investors and we begin the second quarter with significant uncertainty on trade policies and legitimate concerns about future economic growth. But there are also positive factors at work that must be considered, including a still-resilient economy and looming positive economic policies such as deregulation and potential tax cut extensions. So, despite depressed investor sentiment, the outlook for the economy and markets is not universally negative.

At Zick Whitted Taub Investment Strategies, we have experienced these types of markets before and are committed to helping you effectively navigate this challenging investment environment. Successful investing is a marathon, not a sprint, and through both bull and bear markets, we will remain focused on the diversified approach set up to meet your long-term investment goals.

Therefore, it's critical for you to stay invested, remain patient, and stick to the plan, as we've worked with you to establish a unique, personal allocation target based on your financial position, risk tolerance, and investment timeline.

We remain vigilant towards risks to portfolios and the economy, and we thank you for your ongoing confidence and trust. Please rest assured that our entire team will remain dedicated to helping you successfully navigate this market environment.

Please do not hesitate to contact us with any questions, comments, or to schedule a portfolio review.

Sincerely,
