Summer is upon us and the U.S. economy is gradually re-opening. Economists confirmed that the U.S. officially entered a recession at the end of February. Recessions are economic contractions and typically occur every 3-5 years. We are cautiously optimistic about this recession's recovery as businesses start to reopen. The Federal Reserve, Treasury and Congress all affirm their commitment to providing the support needed to get back on track. Now is the time for you to consider your personal financial plan to be sure you can withstand any surprises ahead.

Thanks for your feedback on our recent webinar, Garden Variety Annuities. We've been publishing our Investor Education Series videos on our website under **Resources**. We plan to continue these virtual webinars on a regular basis, so watch your email for the invitations. Be sure to check out our **How To** videos to learn about all the valuable tools you have through your online Client Access.

Foreign Tourists

More than 79 million foreign tourists visited the United States in 2019, adding \$254 billion to the U.S. economy. Residents of Canada and Mexico accounted for almost half of the total, while the countries below were the top 10 sources of overseas visitors. Travel restrictions and lockdowns due to COVID-19 have severely disrupted the flow of foreign tourists in 2020. It's too early to know the full extent of the damage to the tourism sector, but the effects may continue for some time after the virus is controlled.

Tapping Retirement Savings During a Financial Crisis

As the number of COVID-19 cases began to skyrocket in March 2020, Congress passed the Coronavirus Aid, Relief, and Economic Security (CARES) Act. The legislation may make it easier for Americans to access money in their retirement plans, temporarily waiving the 10% early-withdrawal penalty and increasing the amount they could borrow. Understanding these new guidelines and the other rules for loans and early withdrawals may help you determine if they are appropriate options during a financial crisis. (Remember that tapping retirement savings now could risk your financial situation in the future.)

Penalty-Free Withdrawals

The newest exception to the 10% early-withdrawal penalty allows IRA account holders and retirement plan participants to take distributions of up to \$100,000 in 2020 for a "coronavirus-related" reason.* These situations include a diagnosis of COVID-19 for account owners and certain family members; a financial setback due to a quarantine, furlough, layoff, or reduced work hours, and in the case of business owners, due to closures or reduced hours; or an inability to work due to lack of child care as a result of the virus. This temporary exception augments the other circumstances for which a penalty-free distribution is typically allowed:

- Death or disability of the account owner
- Unreimbursed medical expenses exceeding 7.5% of adjusted gross income (increases to 10% in 2021)
- A series of "substantially equal periodic payments" over your life expectancy or the joint life expectancy of you and your spouse
- Birth or adoption of a child, up to \$5,000 per account owner
- Certain cases when military reservists are called to active duty

In addition, IRAs (but not work-based plans) allow penalty-free withdrawals for a first-time home purchase (\$10,000 lifetime limit), qualified higher-education expenses, and payments of health insurance premiums in the event of a layoff.

Work-based plans allow exceptions for those who separate from service after age 55 (50 in the case of qualified public safety employees) and distributions as part of a qualified domestic relations order.

Tax Consequences

Penalty-free does not mean tax-free, however. In most cases, when you take a penalty-free distribution, you must report the full amount of the distribution on your income tax return for that year. However, the income associated with a coronavirus-related distribution can be spread over three years for tax purposes, with up to three years to reinvest the money.¹

Retirement Plan Loans

If your work-based retirement plan allows loans, you typically can borrow up to the lesser of 50% of your vested balance or \$50,000. Most loans must be repaid within five years, but if the money is used to purchase a primary residence, the repayment period may be longer. The CARES Act permits employers to increase this amount to the lesser of 100% of the vested balance or \$100,000 for loans to coronavirus-affected individuals made between March 27, 2020, and September 22, 2020.* Affected participants who have outstanding loans on or after March 27, 2020, will be able to delay any payments due in 2020 by one year.²

Hardship Withdrawals

Many work-based retirement plans also permit hardship withdrawals in certain circumstances. Although these distributions are not exempt from the 10% early-withdrawal penalty, they can be a lifeline for people who need money in an emergency.

For more information about your options, contact your IRA or retirement plan administrator.

*Employers do not have to adopt the new withdrawal and loan provisions.

1) Amounts reinvested may reduce your tax obligation on the distributions; however, due to the timing of distributions and required tax filings, you may have to file an amended return to seek a refund on any taxes previously paid on withdrawn amounts. 2) The original five-year repayment period will be extended for the delay, but interest will continue to accrue. 3) Source: Plan Sponsor Council of America, 2019 (2018 data)

Five Industries Most Likely to Offer Retirement Plan Loans

Percentage of plans that offer loans, by type of industry³

Portfolio Performance: Choose Your Benchmarks Wisely

Dramatic market turbulence has been common in 2020, and you can't help but hear about the frequent ups and downs of the Dow Jones Industrial Average or the S&P 500 index. The performance of these major indexes is widely reported and analyzed in detail by financial news outlets around the nation.

Both the Dow and the S&P 500 track the stocks of large domestic companies. But with about 500 stocks compared to the Dow's 30, the S&P 500 comprises a much broader segment of the market and is considered to be representative of U.S. stocks in general. These indexes are useful tools for tracking stock market trends; however, some investors mistakenly think of them as benchmarks for the performance of their own portfolios.

It doesn't make sense to compare a broadly diversified, multi-asset portfolio to just one of its own components. Expecting portfolio returns to meet or beat "the market" in good times is usually unrealistic, unless you are willing to expose 100% of your savings to the risk and volatility associated with stock investments. On the other hand, if you have a well-diversified portfolio, you might be happy to see that your portfolio doesn't lose as much as the market when stocks are falling.

Asset Allocation: It's Personal

Investor portfolios are typically divided among asset classes that tend to perform differently under different market conditions. An appropriate mix of stocks, bonds, and other investments depends on the investor's age, risk tolerance, and financial goals.

Consequently, there may not be a single benchmark that matches your actual holdings and the composition of your individual portfolio. It could take a combination of several benchmarks to provide a meaningful performance picture. There are hundreds of indexes based on a wide variety of markets (domestic/foreign), asset classes (stocks/bonds), market segments (large cap/small cap), styles (growth/value), and other criteria.

The desire to become a more disciplined investor is often tested by the arrival of your account statements.

Keep the Proper Perspective

Seasoned investors understand that short-term results may have little to do with the effectiveness of a long-term investment strategy. Even so, the desire to become a more disciplined investor is often tested by the arrival of your account statements.

Making decisions based on last year's — or last month's — performance figures may not be wise, because asset classes, market segments, and industries do not always perform the same from one period to the next. When an investment experiences dramatic upside performance, much of the opportunity for market gains may have already passed. Conversely, moving out of an investment when it has a down period could take you out of a position to benefit when that market segment starts to recover.

There's nothing you can do about global economic conditions or the level of returns delivered by the financial markets, but you can control the composition of your portfolio. Evaluating investment results through the correct lens may help you make appropriate adjustments and plan effectively for the future.

The performance of an unmanaged index is not indicative of the performance of any specific security, and individuals cannot invest directly in an index. Asset allocation and diversification are methods used to help manage investment risk; they do not guarantee a profit or protect against investment loss. All investments are subject to market fluctuation, risk, and loss of principal. Shares, when sold, may be worth more or less than their original cost. Investments that seek a higher return tend to involve greater risk.

Debit or Credit? Pick a Card

Americans use debit cards more often than credit cards, but they tend to use credit cards for higher-dollar transactions. The average value of a debit-card transaction in 2018 was just \$36, while credit-card transactions averaged \$89.¹

This usage reflects fundamental differences between the two types of cards. A debit card acts like a plastic check and draws directly from your checking account, whereas a credit-card transaction is a loan that remains interest-free only if you pay your monthly bill on time. For this reason, people may use a debit card for regular expenses and a credit card for "extras." However, when deciding which card to use, you should be aware of other differences.

Fraud protection. In general, you are liable for no more than \$50 in fraudulent credit-card charges. For debit cards, a \$50 limit applies only if a lost card or PIN is reported within 48 hours. The limit is \$500 if reported within 60 days, with unlimited liability after that. A credit card may be safer in higher-risk situations, such as when shopping online, when the card will leave your sight (as in a restaurant), or when you are concerned about the security of a card reader. If you regularly use a debit card in these situations, you may want to maintain a lower checking balance and keep most of your funds in savings.

Merchant disputes. You can dispute a credit-card charge before paying your bill and shouldn't have to pay it while the charge is under dispute. Disputing a debit-card charge can be more difficult when the charge has been deducted from your checking account, and it may take some time before the funds are returned.

Rewards and extra benefits. Debit cards offer little or no additional benefits, whereas some credit cards offer cash-back rewards, and major cards may include extra benefits such as travel insurance, extended warranties, and secondary collision and theft coverage for rental cars (up to policy limits). Of course, if you do not pay your credit-card bill in full each month, the interest you pay can outweigh any financial rewards or benefits.

Credit history. Using a credit card can affect your credit score positively or negatively, depending on how you use it. A debit card does not affect your credit score.

Considering the additional protections and benefits, a credit card may be a better choice in some situations — but only if you pay your monthly bill on time.
