Market Strategies: Three Ways to Play Defense in Your Stock Portfolio

Defensive investment strategies share a common goal — to help a portfolio better weather an economic downturn and/or bouts of market volatility. But there are some key differences,

including the specific criteria by which particular stocks are selected. If you are nearing retirement or just have a more conservative risk tolerance, one of these defensive strategies may help you manage risk while maintaining a robust equity portfolio.

Tilt toward value

Growth and value are opposite investment styles that tend to perform differently under different market conditions. Value stocks are associated with companies that appear to be undervalued by the market or are in an out-of-favor industry. These stocks may be priced lower than might be expected in relation to their earnings, assets, or growth potential, but the broader market is expected to eventually recognize the company's full potential.

Established companies are more likely than younger companies to be considered value stocks. These firms may be more conservative with spending and emphasize paying dividends over reinvesting profits. Unlike value stocks, growth stocks may be priced higher in relation to current earnings or assets, so investors are essentially paying a premium for growth potential. This is one reason why growth stocks are typically considered to carry higher risk than value stocks.

Seek dividends

Whereas stock prices are often unpredictable and may be influenced by factors that do not reflect a company's fiscal strength (or weakness), dividend payments tend to be steadier and more directly reflect a company's financial position. Comparing current dividend yields, and a company's history of dividend increases, can be helpful in deciding whether to invest in a stock or stock fund.

The flip side is that dividend-paying stocks may not have as much growth potential as

non-dividend payers, and there are times when dividend stocks may drag down, not boost, portfolio performance. For example, dividend stocks can be sensitive to interest rate changes. When rates rise, the higher yields of lower risk fixed-income investments may become more appealing, placing downward pressure on dividend stocks.

Temper volatility

All stocks are volatile to some degree, but some have been less volatile historically than others. Certain mutual funds and exchange-traded funds (ETFs) labeled "minimum volatility" or "low volatility" are constructed with an eye toward reducing risk during periods of market turbulence.

One commonly used measure of a stock or stock fund's volatility is its beta, which is typically published with other information about an investment. The U.S. stock market as a whole is generally considered to have a beta of 1.0. In theory, an investment with a beta of 0.8 might experience only 80% of losses during a downswing — and thus would have less ground to regain when the market turns upward again.

The return and principal value of all investments fluctuate with changes in market conditions. Shares, when sold, may be worth more or less than their original cost. Investing in dividends is a long-term commitment. The amount of a company's dividend can fluctuate with earnings, which are influenced by economic, market, and political events. Dividends are typically not guaranteed and could be changed or eliminated. Low-volatility funds vary widely in their objectives and strategies. There is no guarantee that they will maintain a more conservative level of risk, especially during extreme market conditions.

Mutual funds and exchange-traded funds are sold by prospectus. Please consider the investment objectives, risks, charges, and expenses carefully before investing. The prospectus, which contains this and other information about the investment company, can be obtained from your financial professional. Be sure to read the prospectus carefully before deciding whether to invest.

Key Estate Planning Documents
Should You Invest Internationally?

What are the warning signs of financial scams targeting older individuals?

Have you checked your tax withholding lately?

Key Estate Planning Documents

There are four key estate planning documents almost everyone should have regardless of age, health, or wealth: a durable power of attorney, advance medical directives, a will, and a letter of instruction.

Estate planning is the process of managing and preserving your assets while you are alive, and conserving and controlling their distribution after your death. There are four key estate planning documents almost everyone should have regardless of age, health, or wealth. They are: a durable power of attorney, advance medical directives, a will, and a letter of instruction.

Durable power of attorney

Incapacity can happen to anyone at any time, but your risk generally increases as you grow older. You have to consider what would happen if, for example, you were unable to make decisions or conduct your own affairs. Failing to plan may mean a court would have to appoint a guardian, and the guardian might make decisions that would be different from what you would have wanted.

A durable power of attorney (DPOA) enables you to authorize a family member or other trusted individual to make financial decisions or transact business on your behalf, even if you become incapacitated. The designated individual can do things like pay everyday expenses, collect benefits, watch over your investments, and file taxes.

There are two types of DPOAs: (1) an immediate DPOA, which is effective at once (this may be appropriate, for example, if you face a serious operation or illness), and (2) a springing DPOA, which is not effective unless you become incapacitated.

Advance medical directives

Advance medical directives let others know what forms of medical treatment you prefer and enable you to designate someone to make medical decisions for you in the event you can't express your own wishes. If you don't have an advance medical directive, health-care providers could use unwanted treatments and procedures to prolong your life at any cost.

There are three types of advance medical directives. Each state allows only a certain type (or types). You may find that one, two, or all three types are necessary to carry out all of your wishes for medical treatment.

- A living will is a document that specifies the types of medical treatment you would want, or not want, under particular circumstances. In most states, a living will takes effect only under certain circumstances, such as a terminal illness or injury. Generally, one can be used only to decline medical treatment

that "serves only to postpone the moment of death."

- A health-care proxy lets one or more family members or other trusted individuals make medical decisions for you. You decide how much power your representative will or won't have.
- A do-not-resuscitate (DNR) order is a legal form, signed by both you and your doctor, that gives health-care professionals permission to carry out your wishes.

Will

A will is quite often the cornerstone of an estate plan. It is a formal, legal document that directs how your property is to be distributed when you die. If you don't leave a will, disbursements will be made according to state law, which might not be what you would want.

There are a couple of other important purposes for a will. It allows you to name an executor to carry out your wishes, as specified in the will, and a guardian for your minor children.

The will should be written, signed by you, and witnessed.

Most wills have to be probated. The will is filed with the probate court. The executor collects assets, pays debts and taxes owed, and distributes any remaining property to the rightful heirs. The rules vary from state to state, but in some states smaller estates are exempt from probate or qualify for an expedited process.

Letter of instruction

A letter of instruction is an informal, nonlegal document that generally accompanies your will and is used to express your personal thoughts and directions regarding what is in the will (or about other things, such as your burial wishes or where to locate other documents). This can be the most helpful document you leave for your family members and your executor.

Unlike your will, a letter of instruction remains private. Therefore, it is an opportunity to say the things you would rather not make public.

A letter of instruction is not a substitute for a will. Any directions you include in the letter are only suggestions and are not binding. The people to whom you address the letter may follow or disregard any instructions.

Take steps now

Life is unpredictable. So take steps now, while you can, to have the proper documents in place to ensure that your wishes are carried out.

Should You Invest Internationally?

In April 2019, despite some positive economic developments, the International Monetary Fund cut its outlook for global growth in 2019 to 3.3%, the lowest level since 2009. At the time of that report, IMF Managing Director Christine Lagarde said a recession was not expected in the near term.

Source: Bloomberg, April 9, 2019

The risks associated with investing on a worldwide basis include differences in financial reporting, currency exchange risk, and economic and political risk unique to the specific country. These risks may result in greater share price volatility and should be carefully managed in light of your goals and risk tolerance.

Investing in foreign stocks provides access to a world of opportunities outside the United States, which may help boost returns and manage risk in your portfolio. However, it's important to understand the unique risk/return characteristics of foreign investments before sending a portion of your money overseas.

Reasons to go abroad

Here are some of the potential benefits of international investing.

Additional diversification. Other countries may be at a different stage in the business cycle than the U.S. economy. They could recover more quickly (or more slowly) from a recession.

Long-term growth potential. Some of the world's most rapidly growing economies are located in emerging markets that may be reaping the benefits of new technologies, a growing consumer base, or natural resources that are in high demand.

Possible hedge against a weaker dollar. The U.S. dollar has been strong in recent years, but having some investments denominated in foreign currencies may help offset (or even take advantage of) any future dips in its value.

Reasons to proceed with caution

Here are just some of the potential risks.

Politics and economic policies. A nation's political structure, leadership, and regulations may affect the government's influence on the economy and the financial markets.

Currency exchange. Just as a weak U.S. dollar could work for you, additional strengthening in the dollar could work against you. That's because any investment gains and principal denominated in a foreign currency may lose value when exchanged back.

Financial reporting. Many developing countries do not follow rigorous U.S. accounting standards, which often makes it more difficult to have a true picture of company and industry performance.

Risk/return potential

Some international investments may offer the chance for greater returns, but as with other investments, stronger potential comes with a greater level of risk. For example, over the past 30 years, foreign stocks have outperformed U.S. stocks, bonds, and cash alternatives 11 times. However, they have also underperformed 11 times, tying cash for the highest number of lowest-performing years during the same time period.

	Number of highest-performing years, 1989-2018
Cash	4
Bonds	5
U.S. Stocks	10
Foreign stocks	11

	Number of lowest-performing years, 1989-2018
Cash	11
Bonds	6
U.S. Stocks	2
Foreign stocks	11

If you decide to spread some of your investment dollars around the world, be prepared to hold tight during bouts of market volatility. And remember to rebalance your portfolio periodically to help align your asset allocation with your long-term investment strategy.

Performance is from January 1, 1989, to December 31, 2018. Cash is represented by the Citigroup 3-month Treasury Bill Index. Bonds are represented by the Citigroup Corporate Bond Composite Index. U.S. stocks are represented by the S&P 500 Composite Price Index. Foreign stocks are represented by the MSCI EAFE Price Index. All indexes are unmanaged, accurate reflections of the performance of the asset classes shown. Returns reflect past performance, which does not indicate future results. Taxes, fees, brokerage commissions, and other expenses are not reflected. Investors cannot invest directly in any index.

The principal value of cash alternatives may fluctuate with market conditions. Cash alternatives are subject to liquidity and credit risks. It is possible to lose money with this type of investment. The return and principal value of stocks may fluctuate with market conditions. Shares, when sold, may be worth more or less than their original cost. U.S. Treasury securities are guaranteed by the federal government as to the timely payment of principal and interest, whereas corporate bonds are not. The principal value of bonds may fluctuate with market conditions. Bonds are subject to inflation, interest rate, and credit risks. Bonds redeemed prior to maturity may be worth more or less than their original cost. Diversification is a strategy used to help manage investment risk; it does not guarantee a profit or protect against investment loss.

What are the warning signs of financial scams targeting older individuals?

If you or someone you know has been targeted by a scam artist who is trying to steal money or personal information, you're not alone. According to the Senate Special Committee on Aging, older Americans lose an estimated \$2.9 billion annually to fraud and exploitation, a number that is probably substantially underreported.¹

Most scams start with a call, an email, a text, or an official-looking letter that appears to be from a government agency or a legitimate company. Sometimes the scam artist will go door-to-door soliciting business or donations to charity.

Scam artists are very good at gaining the trust of well-meaning people by convincingly impersonating someone authoritative, knowledgeable, or trustworthy — such as an IRS agent, a tech repair person, or even a relative. They play on your sympathy or make convincing threats to pressure you to go along with a scam. "Send money or provide personal information right now," they say, "if you want to help someone or prevent something bad from happening." Here are some typical scenarios.

- **IRS scam:** "You owe back taxes and penalties. Send payment immediately via a wire transfer, or you will be arrested."
- **Sweepstakes scam:** "Congratulations, you've won a prize! To collect it, provide us with your bank account number so we can deposit a check."
- **Grandparent scam:** "Hi Grandma, it's me. Don't you recognize my voice? I've been in an accident and need money for car repairs. Send gift cards, and don't tell anyone because I'm embarrassed."
- **Home repair scam:** "I was just doing some work down the street for your neighbor, Bob, and I saw that you need some shingles replaced. I can do that for half the price I usually charge if you pay me in cash today."

If you are targeted, never give out personal information or send money. You don't need to make a quick decision. Call a friend, a relative, or the police for advice. Report the scam immediately to a fraud hotline such as the Senate Committee's toll-free hotline, (855) 303-9470.

Have you checked your tax withholding lately?

If you were unpleasantly surprised by the amount of tax you owed or the amount of your tax refund when you filed your 2018 tax return, it may be time to check your withholding.

It may also be time if there are changes in your life or financial situation that affect your tax liability. For example, have you recently married, divorced, had a child, purchased a new home, changed jobs, or had a change in the amount of your taxable income not subject to withholding (e.g., capital gains)?

You can generally change the amount of federal tax you have withheld from your paycheck by giving a new Form W-4 to your employer. You can use a number of worksheets for the Form W-4 or the IRS Withholding Calculator (available at [irs.gov](https://www.irs.gov)) to help you plan your tax withholding strategy.

If changes reduce the number of allowances you are permitted to claim or your marital status changes from married to single, you must give your employer a new Form W-4 within 10 days. You can generally submit a new Form W-4 whenever you wish to change your withholding allowances for any other reason.

In general, you can claim various withholding allowances on the Form W-4 based on your tax filing status and the tax credits, itemized deductions (or any additional standard deduction for age or blindness), and adjustments to income that you expect to claim. You might increase the tax withheld or claim fewer allowances if you have a large amount of nonwage income. (If you have a significant amount of nonwage income, you might also consider making estimated tax payments using IRS Form 1040-ES.) The amount withheld can also be adjusted to reflect that you have more than one job at a time and whether you and your spouse both work. You might reduce the amount of tax withheld by increasing the amount of allowances you claim (to the extent permissible) on the Form W-4.

You can claim exemption from withholding for the current year if: (1) for the prior year, you were entitled to a refund of all federal income tax withheld because you had no tax liability; and (2) for the current year, you expect a refund of all federal income tax withheld because you expect to have no tax liability.
